LittleSoft
Infinite Power from Beyond the Clouds

- ✓ LS Workflow improves your managerial decisions, approval of applications, and document reviews with simple browser operations in cloud environment
- ✓ Your decision-making will be high speed using smartphones from outside your office
- ✓ The workflow will be automated by forms and approval routes with various input types, flexible settings and databases

Features

Rich application contents

Various and advanced items are available to create application forms such as texts, selectable lists, tables, calculating formulas, and DB selections Applications can even generate new database tables.

Flexible route settings

A single application form can have multiple routes You set up conditions with each approval step, and the system automatically selects which route to proceed depending on application contents.

Easy to use

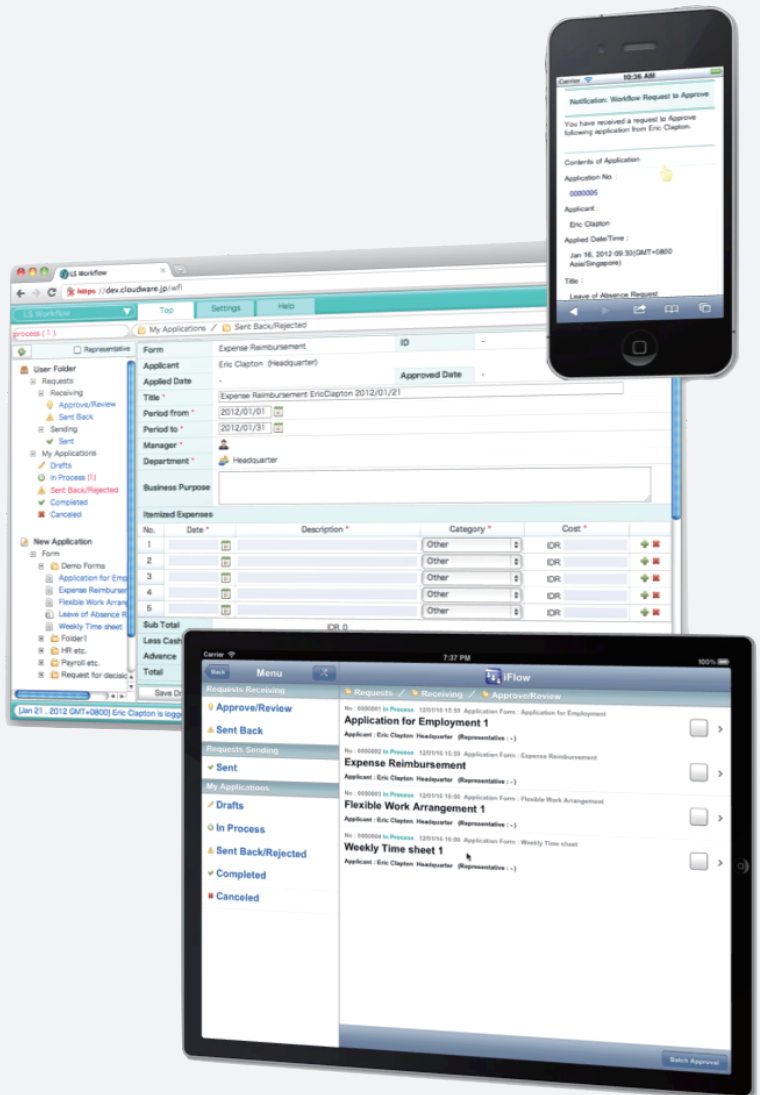

You can check and approve applications just like you send and receive emails. Applications are grouped into ones you submit and ones you are requested to approve, and they are divided further into application statuses. Applications are processed simply with a click to display contents and a click to finish approving.

Mobile support

You can approve applications simply by clicking a link in email using iPhone. And you can use a comfortable user interface built for the iPad. It supports the creation of new application and database browsing.

Internationalization

The service supports English, Japanese, Korean, and Chinese (simplified characters) languages, and this internationalization is highly reputed by global companies.
